## BEC CHECKLIST

Business Email Compromise (BEC) is when an attacker pretends to be someone they aren't on email, typically senior management, to achieve their own ends. BEC costs organisations globally a staggering amount of money, but there are some simple steps you can take to put a stop to it.

## TEN TOP TIPS

## TO STOP BUSINESS EMAIL COMPROMISE FROM IMPACTING YOUR BUSINESS

- Watch out for plain text emails appearing to come from the CEO / CFO or other senior management
- Check the 'Reply to' address carefully look for the use of nearby or cousin domains
- CEO Fraud emails will be thoroughly researched and often target specific members of the finance team who may need additional security or education
- Implement a process for handling email requests to pay suppliers and make urgent bank transfers which involves contacting the originator directly to confirm any request
- If a request or invoice can't be matched to a purchase order it should be investigated
- Consider manual approval(s) for payments above a certain threshold
- Repeatedly train all staff, not just the finance team, using examples of the latest phishing scams
- Consider purchasing nearby domains (e.g. censornet.co, censOrnet.com) to prevent their use in attacks
- Protect user accounts such as Outlook Web Access with adaptive multi-factor authentication
- Use a modern multi-layered email security solution that includes features to identify and quarantine/drop fraudulent emails, integrated domain name checking and executive tracking that identifies real names in multiple address fields.
