Compliance Module

Ensure compliance with regulatory standards and mitigate the risk of misconfiguration, protecting your sensitive data from unauthorised access. CSPM and SSPM controls help identify and remediate risks in cloud infrastructure and cloud-based SaaS Applications.

The ever increasing complexity and complex, interconnected nature of cloud environments make them particularly vulnerable to security misconfigurations, emphasising the need for robust control. Improperly configured SaaS and IaaS policies are significant contributors to data breaches: in 2023 63% of organisations experienced a security incident due to a misconfiguration and today the primary cause of cloud data loss for 55% of businesses is due to human error.

Based on the Cloud Application Control technology within the Censornet Integrated Security Platform customers now have the ability to connect their Cloud Infrastructure and SaaS Applications via API and continuously monitor their configurations for potential errors and settings that may put them at risk of data breach.

By combining Cloud Security Posture Management (CSPM) and SaaS Security Posture Management (SSPM) in a single module it allows you to focus on identifying and mitigating risk across all your cloud services. This ensures compliance with industry standards by automating the detection of misconfigurations to prevent unauthorised access.

By integrating CSPM and SSPM with Censornet's powerful CASB technology organisations can achieve a unified security posture - protecting the applications they rely on, ensuring robust user security, and increasing operational efficiency across the entire digital ecosystem.

ENSURE COMPLIANCE WITH SECURITY POSTURE MANAGEMENT

CSPM

- Automated security assessments and misconfiguration detection of cloud infrastructure.

- API-based connectors to major IaaS platforms such as AWS, Azure, GCP.

SSPM

- Extending Censornet's award-winning CASB technology via API to give visibility of security configuration across SaaS Apps.

- Identify and mitigate excessive of unnecessary permissions

- Instant visibility of non-compliant settings and Indicators of Risk direct you to the critical items to address, no guesswork.

- Direct links to remediation guide you towards WHERE and HOW to implement corrective action.

- Assistance with Audit preparation and documentation for compliance.

- Identify and prioritise risk based on potential impact.

censornet.
We understand that managing multiple vendor's product configurations can be overwhelming which is why every risk identified can be inspected. We explain what the control is, why it's failed, and more importantly what to do to remediate it quickly and effectively.
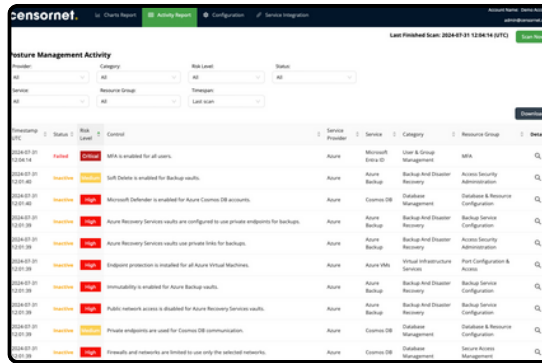

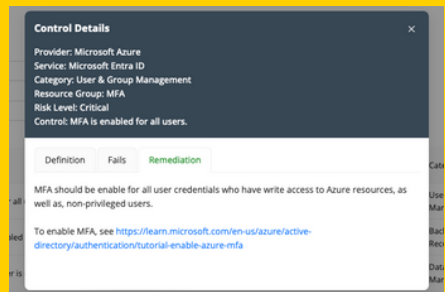

Once you've connected the service's API to our platform we'll carry out regular scans of it's configuration. The activity report gives an interactive view of the top risks and highlights critical vulnerabilities.

Made a change? You can run on-demand scans and download the reports for audit compliance and documentation.

"Censornet's Compliance module was simple to setup and gives nice, clear guidance to help us with regulatory certification" - UK Healthcare Trust

Simple Configuration

New services can be integrating by simply creating an API connection. Most IaaS and SaaS products enable this through creation of an API Key and Secret which you copy and paste into the Compliance dashboard. Once setup the system will scan the configuration within minutes and display a detailed report.

The dashboard will highlight all unconfigured or misconfigured controls with an associated Risk level. If the setting is something you don't utilise or are comfortable with the risk you can mark it as deactivated so subsequent scans don't alert you.

For active alerts, simply configure the control from the dashboard*

*service API must support writing configuration rules
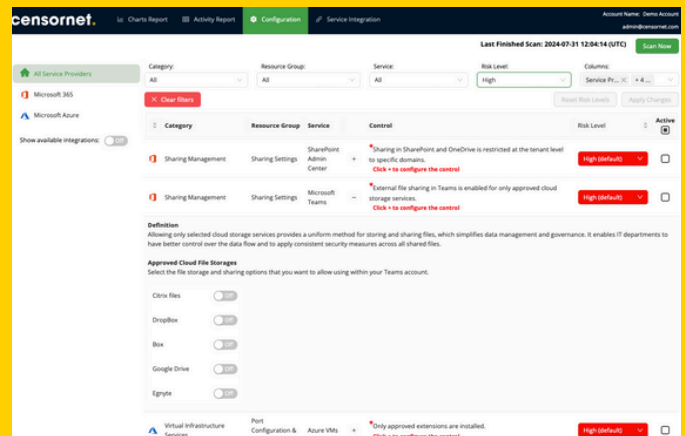

KEY FEATURES

Services Supported*	**CSPM:** AWS, Azure, GCP **SSPM:** Microsoft 365, Salesforce
Licensing	Per API Connector
Support	All connectors documented with Quickstart Guides help.clouduss.com/posture-management-cspm-sspm

*more services added regularly or by request.

Autonomous Integrated Cloud Security

E. EMAIL

Secure your entir e organization from kno wn, unknown & emerging email security threats - including email fraud.

S. SAT

Defend your organisation against cybercriminals by strengthening your engaging and stimulating automated training.

W. WEB

Protect users from webborne malware, offensive or inappropriate content & improve productivity.

C. CASB

Discover, analyze, secure & manage user interaction with cloud applications.

Manage risk and maintain compliance through visibility and control of Cloud IaaS and SaaS platforms.

Control user access and automatically authenticate with rich contextual data with adaptive MFA & IDaas.

Our Platform

Our cloud security platform integrates email, web, and cloud application security, seamlessly with identity management and advanced data loss prevention to activate the Autonomous Security Engine (ASE).

This takes you beyond alert driven security and into real-time automated attack prevention.

Advanced DLP

Prevent sensitive data getting into the wrong hands.

Enterprise-grade DLP across email, web and cloud applications for the ultimate real-time protection.

Autonomous Security Engine

Prevent attacks before they enter the kill chain.

Enable traditionally silo'd products to share and react to security events and state data whilst leveraging world class threat intelligence.
